Art Unit: 1638

1. Applicant's amendment of the claims in Paper No. 9, filed 15 October, 2001, makes it clear that the application is already in sequence compliance. Thus, the requirement to comply with the sequence rules is WITHDRAWN.

Election/Restrictions

2. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in response to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1, 3-13, and 16-17, drawn to a nucleic acid encoding a fusion protein comprising two anti-pathogenic proteins linked by a linker peptide, plants transformed with that nucleic acid, and a method of using it to improve pathogen resistance in a plant.

Group II, claim(s) 2 and 14, drawn to a nucleic acid encoding a fusion protein comprising three or more anti-pathogenic proteins linked by a linker peptide and a method of using it to improve pathogen resistance in a plant.

Group III, claim(s) 15, drawn to a fusion protein comprising two anti-pathogenic proteins linked by a linker peptide.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: These inventions do not constitute an advance over

Art Unit: 1638

the prior art. Warren et al (WO 96/10083, sent by Applicant as part of Paper No. 3) teach a nucleic acid encoding a fusion protein comprising two VIP proteins linked by a linker (pg 91, last paragraph, to pg93, paragraph 2).

These groups are deemed to lack unity of invention because they are not so linked to form a single general inventive concept.

Inventions I and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions have different modes of operation and different functions. The first invention is distinct from invention III because the former requires isolated DNA and methods for plant transformation and regeneration not required by the latter, while the latter requires isolated proteins not required by the former. Lastly, DNA and protein differ in composition, structure and function.

Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The nucleic acid of invention II requires sequences not required by invention I.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fields of search, and classification, restriction for examination purposes as indicated is proper.

Art Unit: 1638

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
